

## Wood Cutting Board Care

To maintain the quality and appearance of your new wood cutting board from ***Sholty Family Homestead***, please follow the instructions below.

- **HAND WASH ONLY**
- Wipe excess water from board after washing and allow to air dry
- With regular use you will need to apply a coat of “Board Butter” once a month, or when you feel the board is becoming dry, or if it seems to become dull in appearance.
  - Board butter should be applied with a clean cloth and left on the board for approximately 10 minutes, after 10 minutes wipe the excess off and it is immediately ready for use.
- Approximately once per year we suggest that you give your cutting board a couple of coats of mineral oil.
  - Mineral oil is what gives your cutting board its lasting protection, and as such it is important that you maintain that
  - To apply mineral oil, pour oil onto surface of cutting board and spread with a clean cloth. It should be evenly glossy across the entire surface. Allow to dry for 20 minutes and apply a second coat. After second coat allow to dry overnight before wiping excess and applying “board butter” as instructed above.

We want you to enjoy your new cutting board for as long as possible, and if you follow these instructions your board will last for years to come, but if there are any flaws in material or workmanship, not caused by normal use, feel free to contact us and we will fix the board free of charge.
